# One Point Solutions
One Point of Contact for IBM Data Solutions

Looking to <u>Migrate Informix</u> to New Hardware, Cloud, or Latest Versions?

Under IBM, the Informix product line has evolved into the most robust, reliable, fault-tolerant and scalable DBMS for OLTP systems as well as a great platform for data warehousing. In addition, 11.7 and updated versions of 4JS Genero and Informix-4GL provide ways to achieve GUI and integration with external data sources (e.g., XML, SOA and Web Services). Informix customers are among the most dedicated in the industry and Informix 11.7 brings the best version ever… has your company upgraded?

Best Database Environment *Ever*!

Your Informix database and applications are trusted – time-tested, stable, and available. Most Informix applications in 4GL, C, and other languages can be migrated along with the database version, but it requires downtime, testing, and data movement. Take advantage of these 11.7 features now:

- Lower cost of ownership
- Continuous availability and enhanced DR
- Easier administration
- Reduced time and effort to compliance
- Increased developer productivity

Why Upgrade *with One Point*?

Due to production loads, projects, overburdened work schedules, company growth and more, most companies have not made the switch to 11.7. One Point's long-term focus on Informix helps you:

- Migrate from unsupported versions
- Optimize license cost savings and planning
- Purchase and renew IBM software
- Provide extensive testing, minimize downtime
- Migrate and modernize apps (not just 4GL)
- Discover faster and lower cost hardware, cloud, and virtualization

One Point's Data and App Upgrade/Modernization Services
No-cost migration consultation when you mention "IIUG"
