

You have the Data: Why not use it?

Integrate ...

Integrate, replicate, and cleanse data from/to disparate databases, cloud, spreadsheets, flat files, web services, unstructured data, and more — all while retaining existing systems.

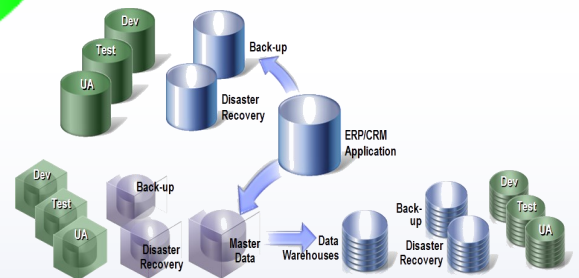

Analyze and Predict ...

Solve spreadsheet dependence. Use natural language and self-service interfaces to create dashboards, historical and predictive analytics, statistical analysis, and financial performance management.

Manage and Grow...

It all starts with the database. Use a variety of database solutions—cloud or local—to store and easily manage structured & unstructured data (JSON, NoSQL, images, PDFs, etc.), data warehouses, in-memory storage, and more.

Start Small, Grow Anywhere with IBM Data and Analytics Solutions

Since 1997, One Point Solutions has focused entirely on IBM data and analytics solutions. This extreme focus allows your company to have **one point of contact** for anything data, eliminating the need for multi-vendor or limited niche solutions. IBM's immense data/analytics portfolio enables **any company—big or small—a one-vendor solution to solve all of its business requirements**, adding solutions as needed. One Point provides the following:

- Cloud and on-prem solutions
- Services, installation, and virtual support
- Proof of concept and demonstrations
- Product licensing and renewals
- Sensor and IoT data & analytics
- Historical and predictive analytics
- Integrate and analyze data from mainframe, system I, and non IBM sources

Watson, Bluemix, Informix, DB2, DashDB, Cloudant, Netezza, DataWorks, Infosphere, Cognos, TM1/Planning Analytics), SPSS
